

Java

```
class Solution {  
    public int carFleet(int target, int[] position, int[] speed) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number} target  
 * @param {number[]} position  
 * @param {number[]} speed  
 * @return {number}  
 */  
var carFleet = function(target, position, speed) {  
  
};
```

TypeScript

```
function carFleet(target: number, position: number[], speed: number[]): number {  
  
};
```

C++

```
class Solution {
public:
    int carFleet(int target, vector<int>& position, vector<int>& speed) {

    }
};
```

C#

```
public class Solution {
    public int CarFleet(int target, int[] position, int[] speed) {

    }
}
```

Kotlin

```
class Solution {
    fun carFleet(target: Int, position: IntArray, speed: IntArray): Int {

    }
}
```

Go

```
func carFleet(target int, position []int, speed []int) int {
```

}
